Seung Yoon Lee

Yale School of Management 165 Whitney Avenue New Haven, CT 06511 seungyoon.lee@yale.edu (917)-922-5785 www.sylee.io

Education

Yale University, School of Management

Ph.D. in Marketing
M.A. & M.Phil. in Marketing

(Expected) 2025

Korea Advanced Institute of Science and Technology (KAIST)

M.S. in Information Systems

2018

2021

B.S. in Industrial Systems Engineering

2016

Minor: Business and Technology Management

Research Interests

Methodological: Structural Modeling, Multimodal Machine Learning, Field Experiments Substantive: Virtual Economy and Commerce, Gaming, CRM, Targeting, Advertising, Gamification Systems

Working Papers

"Customer Management in Gaming Environments: A Dynamic Structural Analysis" (with K. Sudhir and Kosuke Uetake) **Job Market Paper**

"Lookalike Targeting on Others' Journeys: Brand Versus Performance Marketing" (with K. Sudhir and Subroto Roy) Under Review, *Marketing Science*

Selected Works in Progress

A Structural Model of Production and Consumption for Virtual Economy (with K. Sudhir)

Information Modality and Persuasion in Advertising: A Customer Journey Perspective

Pre-Ph.D. Publication

Lee, Seung Yoon, Yoonseock Son, and Wonseok Oh "Effectiveness of Integrated Offline-and-Online Promotions in Omnichannel Targeting: A Randomized Field Experiment" *Journal of Management Information Systems* (2021)

Awards & Honors

AMA-Sheth Foundation Doctoral Consortium Fellow

2023

The Grand Prix Award, Undergraduate Research Program, KAIST

2014

• "Optimizing Distribution of Items in Fashion Industry using Big Data and Business Analytics" (with So Yeon Kim, Eun Jeong Ko, Ji Eun Roh, and Young Jae Jang)

Industrial Systems Engineering Frontier Award, KAIST

2014

Conference Presentations

"Ownership and Commercial Rights in the Metaverse: Case of NFTs"

• International Conference on Crypto-Marketing, Columbia Business School, December,

"The Digital Diet: Effects of Self-Regulatory IT Artifacts on Mobile App Usage Patterns"

• INFORMS Conference on Information Systems and Technology (CIST), Houston, TX, 2017

"Omnichannel Targeting: A Randomized Field Experiment on "Online-to-Offline-to-Online" Promotions"

• Workshop on Information Systems and Economics (WISE), Seoul, South Korea, 2017

"Distribution Optimization in Fashion Retail Industry: a Case Study at Kolon Sports"

• Proceedings of the 15th Asia Pacific Industrial Engineering & Management Systems Conference (APIEMS), Jeju, South Korea, 2014

Teaching Interests

Customer Analytics, AI & Digital Marketing, Metaverse Strategy, Applied Machine Learning

Teaching Experience

Teaching Assistant Yale School of Management

AI Strategy & Marketing (MBA)	Vineet Kumar (Spring 2022, 2024)
Basics of Economics (Core, EMBA)	Kai Hao Yang, Jidong Zhou (Summer 2023)
Big Data & Customer Analytics (MBA)	Kosuke Uetake (Spring 2021)
Customer (Core, EMBA)	K. Sudhir (Fall 2022)
Digital Strategy (MBA)	Vineet Kumar (Fall 2020, 2021)
Managing Marketing Programs (MBA)	Jiwoong Shin (Spring 2020, 2021)
Marketing Strategy (MBA, EMBA)	Jiwoong Shin (Fall 2019, 2020, 2021, 2023)
Strategic Market Measurement (MBA)	Aniko Oery (Fall 2019)

Work Experience

Ph.D. Research Intern, Game Company, South Korea	Winter 2022
• company name anonymized due to NDA	
Ph.D. Research Intern, Zuora (Subscriptions Platform), San Francisco, CA	Summer 2019
Research Intern, RecoBell (Recommender Systems Startup), Seoul, Korea	Winter 2017
Research Assistant, System Design Management Laboratory, KAIST	Summer 2014

Workshop Attendance

Dynamic Structural Econometrics Summer School	2023
IBM Neuro-Symbolic AI Summer School/ Winter Workshop	2022 - 2024
Quantitative Marketing and Structural Econometrics Workshop	2019

Personal

American International Education

• Dubai, United Arab Emirates (2004-2009); Riyadh, Saudi Arabia (2009-2011)

Ph.D. Coursework

Department of Economics

Customer Management in Gaming Environments: A Dynamic Structural Analysis (with K. Sudhir and Kosuke Uetake) Job Market Paper

Gaming and gamified environments possess unique characteristics that influence how consumers spend time and money. The core of the customer management problem in such environments is to ensure that the challenge is difficult enough to motivate agents to spend time and exert effort, yet not so challenging that they get discouraged and quit. In gaming, firms also monetize players' motivation to exert effort by providing them an opportunity to purchase ability-enhancing items that increase their performance; this can increase player retention, while simultaneously driving future monetization as players reach higher levels – creating the possibility of a positive feedback loop between retention and monetization. In this paper, we develop a dynamic structural model of consumer response for gaming environments. The model accommodates key features that are common in such environments: (i) increasing levels of difficulty that result in player attrition, retaining only the most able players, and (ii) opportunity to purchase in-game items that improve players' ability to win. The dilemma for game designers is to manage the dynamics between retention and monetization for players with widely ranging ability levels and gameplay preferences. Estimates reveal three latent segments of players: premium enthusiasts who derive enjoyment from play itself and have the lowest price sensitivity; and win-seekers and progressseekers who both find playing the game itself costly and have higher price sensitivity—the former primarily values immediate rewards, while the latter also values level-up rewards. We investigate three types of personalized interventions: targeted discounts from the monetization front; dynamic difficulty adjustment (DDA) from the retention front; and game environment change through DDA - enabling firms to harness the positive feedback loop between production and purchases.

Lookalike Targeting on Others' Journeys: Brand Versus Performance Marketing (with K. Sudhir and Subroto Roy)

Lookalike Targeting is a widely used model-based ad targeting approach that uses a seed database of individuals to identify matching "lookalikes" for targeted customer acquisition. An advertiser has to make two key choices: (1) who to seed on and (2) seed-match rank range. First, we find that seeding on others' journey stage can be effective in new customer acquisition; despite the cold start nature of customer acquisition using lookalike audiences, third parties can indeed identify factors unobserved to the advertiser that move individuals along the journey and can be correlated with the lookalikes. Further, while journey-based seeding adds no incremental value for brand marketing (click-through), seeding on more downstream stages improves performance marketing (donation) outcomes. Second, we evaluate audience expansion strategies by lowering match ranks between the seed and lookalikes to increase acquisition reach. The drop in effectiveness with lower match rank range is much greater for performance marketing than for brand marketing. Performance marketers can alleviate the problem by making the ad targeting explicit, and thus increase perceived relevance; however, it has no incremental impact for higher match lookalikes. Increasing perceived targeting relevance makes acquisition cost comparable for both high and low match ranks.
